EXPERIENCE

CompanyOS **Aug 2026 – Present**

Founder & Software Engineer *usecompanyos.com*

- Building an AI company brain: a multi-agent system that connects to a company's tools through Nango's MCP server and unifies scattered data into one memory layer that learns from every decision users approve or reject.
- Developing tool-calling agents that produce daily per-employee briefings over iMessage and a web dashboard, plus alerts when a leadership decision conflicts with what the company data shows.
- Designing spend analysis that identifies where a company is burning money and generates per-employee efficiency plans. Pre-launch with an early waitlist. Stack: Python, FastAPI, Next.js, Nango.

BeRelentless **Jan 2026 – Jun 2026**

Founder & Software Engineer *berelentless.dev*

- Turned my final-year dissertation into a startup: an AI hiring platform where graduates filtered out by CV screens prove their skills in live voice interviews with a real-time avatar. Won a Cartesia startup credit grant.
- Engineered the real-time voice agent pipeline end to end: LiveKit for audio/video transport, Whisper speech-to-text, a GPT-4o interviewer agent handling follow-ups, and Cartesia text-to-speech.
- Built a RAG matching layer on Qdrant with BGE-M3 embeddings that ranks candidates against each startup's role requirements, plus a verified skill score founders search by. Deployed on DigitalOcean.
- Designed AI-allowed assessments (build with an agent, fix a failing agent, live bug fix, code review) that score judgment and live verbal defence instead of recall. Ran engineering, design and go-to-market solo.

Castly (Next Stage Talent) **2025 – Present**

Freelance Software Engineer *castly.co.uk*

- Rebuilt a casting agency's spreadsheet-driven operations into an automated two-sided marketplace for clients and talent, now with **460+ verified performers**.
- Automated the daily workflow end to end (applications, casting-director database, opportunity scraping), cutting manual work by **40%** and **doubling bookings**. Ran ElevenLabs voice for booking calls, then retired it when per-call cost outweighed the value.

Stealth Health-Tech Startup (NDA) **Sep 2025 – Dec 2025**

Software Engineer *London, UK*

- Built a FastAPI and Supabase backend that ingests smartwatch data and turns it into personalised habit and supplement recommendations instead of raw metrics.
- Instrumented services with OpenTelemetry tracing and metrics, and built Grafana dashboards to monitor performance and usage.

PROJECTS

ChildrenStudy | Multi-agent school operations system **Live pilot**

- Orchestrates multiple AI agents that run a school like a chief of staff: monitoring activity, reporting to admin, and assigning and guiding teacher tasks. In live pilot with **5 teachers and 10 students**.
- Gives every student a personalised AI tutor. Architected for near-zero running cost on PocketBase, Cloudflare Pages and free-tier models via OpenRouter, so an under-funded school can run it.

Nexus GTM | AI outbound and campaign engine **2026**

- Built an agent that takes a company's ICP and performance data, delivers enriched leads every week via Apollo, Firecrawl and Apify, and generates outbound marketing campaigns tailored to each industry. Used to run BeRelentless outbound.

EDUCATION

University of East London **2026**

BSc (Hons) Computer Science *London, UK*

- Software Development 94%, Artificial Intelligence 93%, Web Development 89%, Data Structures & Algorithms 88%

SKILLS

AI & Agents: Multi-agent orchestration, tool calling (MCP), memory layers, RAG, embeddings (BGE-M3), vector search (Qdrant, ChromaDB), structured outputs (Pydantic, JSON schema), prompt caching, LLM APIs (OpenAI, OpenRouter)

Real-Time Voice: LiveKit, Whisper, Cartesia, ElevenLabs

Languages: Python, TypeScript, JavaScript, SQL, Java

Backend & Web: FastAPI, asyncio, REST APIs, Next.js, React, Node.js

Data: PostgreSQL, Supabase, PocketBase, Redis

Cloud, DevOps & Observability: Docker, GitHub Actions (CI/CD), DigitalOcean, Vercel, Cloudflare, Linux, Sentry, PostHog, OpenTelemetry, Grafana

Tools: Git, GitHub, Claude Code, Cursor, Nango
